1st Rank Free Project Download
www.codecreator.org

Certificate

This is to certify that

CodeCreator.org

1st Rank free project download site providing Free Project. Now your duty is to make this project advanced. We provide you following project.
Enjoy the project.

“File Uploader & Downloader”

Available Project List

- Open Source Video Streaming
- Online Email System
- Library management system
- Bus Reservation System
- Mass Mailer Project
- Data Compression using Huffman coding
- Online Doctor Appointment
- Airline Reservation System
- Online Quiz System
- Online Examination System Project
- College Management System
- University Management System
- Blood Bank System
- Student Management System
- Online Job Search Engine
- Travel and Tourism System
- Online Banking Software
- Car Sale Management System
- Hospital Management System
- Social Networking Project Like Facebook
- Webcam Live Streaming
- Unit Convert php
- Free Chat Application Project
- Java Web Browser
- Online Voting System
- Student Result Management System
- Online Course Registration System
- Employee Attendance system
- Electrical Engineering Project Ideas
- Transport Management System Project

1st Rank Free Project Download
www.codecreator.org

- Car Rental System Project
- Attendance Management System
- Bookshop Management System Project
- Advanced ATM System Project
- Text Editor Application
- Virtual Classroom System
- Inventory Management System
- Vehicle Reservation Management System
- Medical Store System Project

- Gas Agency System Software
- Computerized Library System Software
- Student FeedBack system
- Employee Feedback System Project
- Institute Management system
- Outgoing main Server Project

Above are few of them. If you want more projects please visit website.

List is update on 13 march 2014.

What is Codecreator.org?

The Codecreator.org is a free project download website. The aim of website is to provide free project. All Engineering, BCS, BE, BTECH, MBA, MTECH Diploma and other computer and Information technology student will download project free from site.

We have A Team Who Care of you and your project Submission.

You May Contact Us by comment

Student can download for reference or submitting of their Mini Projects as well as Major Projects. The Free Project Download Website provides to reuse the resources and avoiding repeated implementation of same project. Instead of Implementation of same project you can take reference and make your own Innovative project by adding Features.

YOUR DUTY TO HELP YOUR FRIENDS

Upload Your Project to Codecreator.org, so you help your Friends Throughout the world. You are thinking why should I do? This is platform for you to publish you and your project. Once project selected every time someone visit or download. Then visitor saw your Detail with project.

You need Following Things before Upload

1. Abstract (2-3 Pages) (Optional)
2. Documentation (WellFormatted)
3. Project Code (Your own Project)
4. Project Run Information (so other take advantage)
5. Your Detail (Name, College, City/ Address, Country)

Send On Email ID : admin@codecreator.org

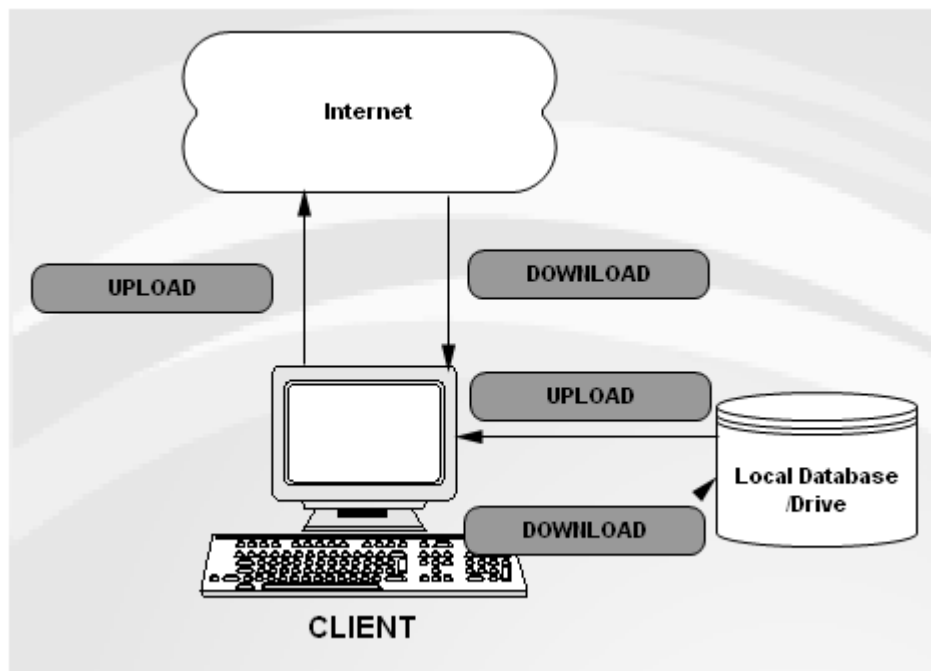

Warning: Don't use project as it is. Because intension is to educate you. If you have any suggestion about website or found any Non-Working Project or Span. please email or comment. So other can't harm of those things.

File Uploader & Downloader

In networks, uploading and downloading refer to the two canonical directions (corresponding to sending and receive, respectively) those information may be move, and further defines such a data has being copied and compiled (indicated by the term "loading") to create a completed file, after given period of time. Downloading has been distinguished from the related concept of Streaming, which indicates download data sequentially usable as it downloads, or "streams", and that (typically) the data is not stored.

This project is a completely software based project built in java for uploading and downloading files from remote locations over the internet.

The software model is as shown in the figure. The client machine has its own local database (usually a hard drive). The files from this drive can be uploaded to any internet space using this software. The project supports two way communications, so it is also possible to download a file from any remote location over the internet to the client machine.

In order to keep the uploading and downloading process secure, the software supports 64-bit RSA encryption. The uploading and downloading process is done using Apache commons Net Library. The uploading and downloading process is carried out using the FTP protocol.
